Hello Community,

today we want to make you familiar with the so called Altitude Profile-Service (APS).

Through the APS you can request an - guess what - Altitude Profile, for the next 50 kilometers of your route. The data this service is based on the freely available [NASA SRTM3 altitude data](#) and is especially interesting for bikers and hikers.

The service was originally created by [Sjors Provoost](#). You owe him the credits 😎

This is how it looks like in AndNav2:

Note: The availability of this service is currently really limited, to some specific areas in Germany: Heidelberg and Berlin. Why? The server-capabilities 😞

Introducing the Altitude-Profile-Service

Anyway, the next version will contain this feature - for the (*for now*) lucky ones.

Best Regards,
Nicolas & Pascal

PS: Oh we almost forgot... if you are familiar with the image below, routing might be close... 🤪
