

Hello Community,

today I updated AndNav¹ on the Android Market. This updated Beta will run at least to **Dec. 31st 2008**

. It also contains

[Veecheck](#)

(by

[Tom Gibara](#)

) the updater-checker also used in AndNav2.

Other changes are:

- GPS is now queried as soon as AndNav is opened.
- So chance the GPS-receiver provides already 'hot' locations when opening the map-screens is bigger.
- Before the GPS was more likely still 'warming up'.

- A bug with the Contacts was fixed, which caused a 'Force Close'
- 'Last working Route' can now be kept when non was found during route-**re**fetching.
- *some more...*

Best Regards,
Nicolas
