## Hello Community,

today we want to make you familiar with the new neat feature of AndNav2. We have added an interface to OpenStreetBug ( [website](#) ) which also is available right here on [andnav.org](http://andnav.org) .

With this tool, you can report bugs in the OpenStreetMap-Data, which can get commented and closed by other members of the OpenStreetMap/AndNav-Community.

Such bugs are i.e.:

- Missing streets
- Misspelled streetnames
- Oneways in the wrong direction
- New roundabouts
- etc...

This feature will be included in the very next version of AndNav2.

Best Regards,  
Nicolas & Pascal
