Hello Community,

the Text-2-Speech (TTS) [Library](#) by [Charles L. Chen](#) AndNav2 is using lately provides a ConfigurationManager, where you can change some settings of the TTS-library.

- "Default Language" will change the 'accent' the voice is using. To actually change the language of the directions, you should choose AndNav2's "DirectionLanguage-Settings"
- "Default Speech Rate" will change the speed, the voice will talk to you.
- Select "Override App Settings" if you want to use these settings instead of AndNav's default settings.
- "Listen to a preview" will say 'Hello' to you in the "Default Language" selected above. (I.e. "Bonjour" having selected French)

That feature will be included from the next released version.

Best Regards,
Nicolas
