

Hello Community,

you might have heard of [Skyhook-Wireless Inc.](#) , Wifi-Positioning and iPhone in one sentence. But from today on you are also aware of a sentence containing

Skyhook, WiFi-Positioning

and

AndNav2

, because from today on we are partnering with Skyhook-Wireless.

Let me quickly explain what is the profit for you.

By combining **GPS**, **Cell tower triangulation** and **Wi-Fi Positioning** through the Skyhook-API, AndNav2 can now locate you faster (usually within 1-5 second), bridging the gap until GPS comes to life. It will also be more accurate, especially in metropolitan areas, where GPS-signal quality usually is not the best. In some high-density urban places it can even locate you indoors, where GPS-only positioning fails completely!

All this is as always **100% free** for you!

Best Regards,

Nicolas
