Hello Community,

Random303, a member of andnav.org has modified the popular [TrekBuddy](#) -AtlasCreator-Tool that it is able to output MapTile-Packs for AndNav2.

You can download both, the executables and the sources from the links below.

Best Regards,
Nicolas

1. Select (maybe zoom) to the area you want to create a maptilepack for.
2. On the left, select the desired 'MapSource' (OpenStreetMap Mapnik is a good choice)
3. Select the desired zoomlevels (below you'll the total number of files that will be downloaded!).
4. In the 'Package Content'-section below hit the 'Add selection' button.
5. Below enter a name, i.e. 'MyMapPack'.
6. In the 'Format'-Selector select 'Untared: tiles in seperate files'. (Otherwise you manually have to untar a couple of files).
7. Hit Create tile package.
