Hello Community,

I have put up a new version of AndNav2 containing a couple of new features, that were previously posted here in the news. Its not well tested, but *should* work the same or better than the previous versions. There for I call it 'bleeding', because it represents the latest development-status and is updated like every or every 2

nd

day.

Still only for:

[»» Download bleeding Alpha ! ««](#)

A little late, but 'Merry Christmas' or whatever you are currently celebrating or not 😊
